

Contrax-flüssig

Active ingredient: Natrium-Warfarin (10,0 g/l)

Liquid concentrate for preparation of baits for control of rats. Especially for use in dry areas where is no possibility to drink.

National regulations for application and trading have to be observed.

Observe directions for use thoroughly. As we have no influence on handling and application we warrant for perfect quality only.

Application: Add a twentyfold amount of water and then 3 % of sugar. Use only clean vessels for mixing. An average of 5 - 10 troughs with 0.5 l of dilution are required for each 100 m² surface. Example: 200 m² = 10 troughs = approximately 5 l dilution = 5 l water + 0,25 l Contrax-flüssig + 150 g sugar.

Contrax-flüssig must be taken at several feedings at intervalls of 1 - 2 days. The effect is cumulative. Use the bait until infestation is completely eliminated.

Especially the „Contrax-Tränke“ is a suitable bait station but one can also use clean, low and stable bowls. Place bait stations in the runways, along walls and in corners as well as near windows where rats lick the

fogged panes. If possible, remove other sources of water, pay also attention to entrances to eaves. Inspect baiting stations daily! If they are half-empty, clean and replenish them in order to prevent an increase of the concentration by evaporation combined with a change in taste.

Harmful

- Harmful in case of ingestion and skin contact. Keep out of reach of children and away from food, beverages and feed. Do not eat, drink, smoke during application. In case of ingestion seek medical advice and show the label.
- Precautions: Contrax-flüssig suspends the clotting of blood and causes internal haemorrhages. In case of accidental swallowing induce vomiting. Call a physician. Antidote: Vitamin K₁. Avoid contact with skin. After application wash hands thoroughly.- Place drinking troughs inaccessible for children and pets. If possible, gather and remove dead and suffered rodents every day.

Store well-sealed drum in a cool room. Dispose empty cans only. Package may not be reused.

Do not apply in areas where food or feed may be contaminated.
